

3.03m high fence panels

"Pro55" Profiled Welded Mesh Panel System

A robust and aesthetically pleasing welded mesh panel system suited to a wide variety of applications from schools and parks to commercial and industrial property. The 200mm x 50mm mesh gives good visibility through the fence whilst the wire diameter and the profiles ensure rigidity. The post has a full length channel strip to the face which clamps the vertical wires of the panel for the entire length adding strength and allowing panels to be stepped on the post without the need for on site drilling or adjustment of fixing brackets. This is a fence with very low maintenance costs owing to the strength of the panel and the galvanised and powder coated finish. The channel clamping strip is supplied with anti-tamper bolts as standard.

Specifications

- Panel:** 2.5m wide
- Height:** Panels available in heights from 600mm to 2.4m and a 3m high panel
- Mesh:** 200mm x 50mm
